The screenshot shows a Google Colab notebook interface. The browser tabs at the top include 'IBM-Project', 'IBM', 'Preparation', 'IBM-Project', '(no subject)', 'My Drive', 'code&tear', and 'Assignment'. The address bar shows the URL: colab.research.google.com/github/IBM-EPBL/IBM-Project-21769-1659791069/blob/main/Assignments/Vishnu%20T-Team%20Lead/Assignment_1.ipynb#s.... The notebook title is 'Assignment_1.ipynb'. The left sidebar shows a file explorer with 'Basic Python' and '1. Split this string'. The main code cell contains the following Python code:

```
[ ] s = "Hi there Sam!"

[ ] s = "Hi there Sam!"
    s = s.split()

    print(s)
```

The output of the code is: `['Hi', 'there', 'Sam!']`. Below the code cell, there is a text prompt: '2. Use .format() to print the following string. Output should be: The diameter of Earth is 12742 kilometers'.

The bottom status bar shows the system clock as 10:59 AM on 11/11/2022, with weather information (78°F Rain) and various system icons.
