1. INTRODUCTION

1.1 Project Overview

In this project, we will be building a chatbot using Watson's assistant.

- To work with Watson Assistant
- Create skills in Watson Assistant
- Use Entities, Intents, Dialogues
- Deploy skill to generate a preview link

1.2 Purpose

Creating a web page and integrating the chatbot to the webpage. This chat should have the following capabilities:

- The Bot should be able to guide a customer to create a bank account.
- The Bot should be able to answer loan queries.
- The Bot should be able to answer general banking queries.
- The Bot should be able to answer queries regarding net banking.

2. LITERATURE SURVEY

2.1 Existing problem

The user is a bank customer who needs 24/7 service to clear all his queries and guide him through all the banking processes. So, an enhanced and smarter way of interaction with the customers has to be built to ensure efficient delivery of service. In order to overcome the user satisfaction issues associated with banking services, chatbot will provide personal and efficient communication between the user and the bank.

2.2 References

1. Ryoji Kashiwagi, "Utilization of artificial intelligence in finance"(2005).
2. Geeta Narula, Rakhi Narula," The Impact of Chat-Bots on the Banking Experience" (2021).
3. Mehmet Ates," Artificial Intelligence In Banking - A Case Study About The Introduction Of A Virtual Assistant Into Customer Service"(2017).
4. Andrew Ng , "What artificial intelligence can do and can't do right now"(2016).

5. Mohamed Hussain Thowfeek, “Drivers Of Artificial Intelligence In Banking Service Sectors”(2020).

2.3 Problem Statement Definition

With our idea we are going to create a bot . The bot should be able to guide a customer to create a bank account and should it be able to answer the loan queries . Our project is capable of multiple language credit and speech recognition.

3. IDEATION AND PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation and Brainstorming

Template

AI based discourse for Banking Industry- Brainstorm and Idea Prioritization

Executing a brainstorm isn't unique; holding a productive brainstorm is. Great brainstorming sessions are ones that set the stage for fresh and generative thinking through simple guidelines and an open and collaborative environment. Use this when you're just kicking-off a new project and want to hit the ground running with big ideas that will move your team forward.

 10 minutes to prepare

 1 hour to collaborate

 2-8 people recommended

→

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

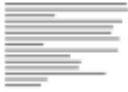

A

Choose your best "How Might We" Questions

Create 5 HMW statements before the activity to propose them to the team.

B

Set the stage for creativity and Inclusivity

C

Learn how to use the facilitation tools

Open article

→

1

Problem statement

Unavailability of chat bots that are interactive enough to navigate the user to do whatever they want. Need for a more User-friendly Interface. The main aim of the project is to develop a smart AI chat-bot for Banking Industry.

🕒 5 minutes

QUESTION
How might we ensure 24*7 chatbot facility?

QUESTION
How might we ensure privacy of customers?

QUESTION
How might we ensure proper interpretation of messages by the chatbot?

QUESTION
How might we increase customer satisfaction on

QUESTION
How might we provide personalized service to customers?

2

Brainstorm solo

How each participant begins in the "brainstorming space" by identifying their starting point and placing their idea into the template. The "brainstorming" session group think and creates an inclusive environment for thoughts and solutions ideas. Set a time limit. Encourage people to go for quantity.

🕒 10 minutes

SAMPATH

Provides Omniclient support	More the Omniclient is implemented and followed, the more language	Storing the customer conversation
Available 24*7	Reduce workload	Improve facilities for future

PRAMODH ARJUN

Full screen Window	OTP Enable	Providing details of the current account details
Crediting the new account based on the customer preference	Helping to lock the account during that period of time	

VISHNU

Transfer Money	Reviewing the balance of an account	Tackling Suspicious Activities
Track Transaction History	Connect with bank staffs	Simple Interface

JASWANTH REDDY

Suggestion and feedback	Less Process Time	Change of Themes
Providing interest related advice	Giving simple solutions	Better Scalability

SHRI RAM

Voice over input Output	Ensured privacy	Instant response
Review bank history through password	Predefined questions	Providing Round-the-clock support

3

Brainstorm as a group

I have everyone move their ideas into the "group sharing space" within the template and have the team silently read through them. As a team, sort and group them by thematic topics or similarities. Discuss and answer any questions that arise. Encourage "Yes, and..." and build on the ideas of other people along the way.

⌚ 20 minutes

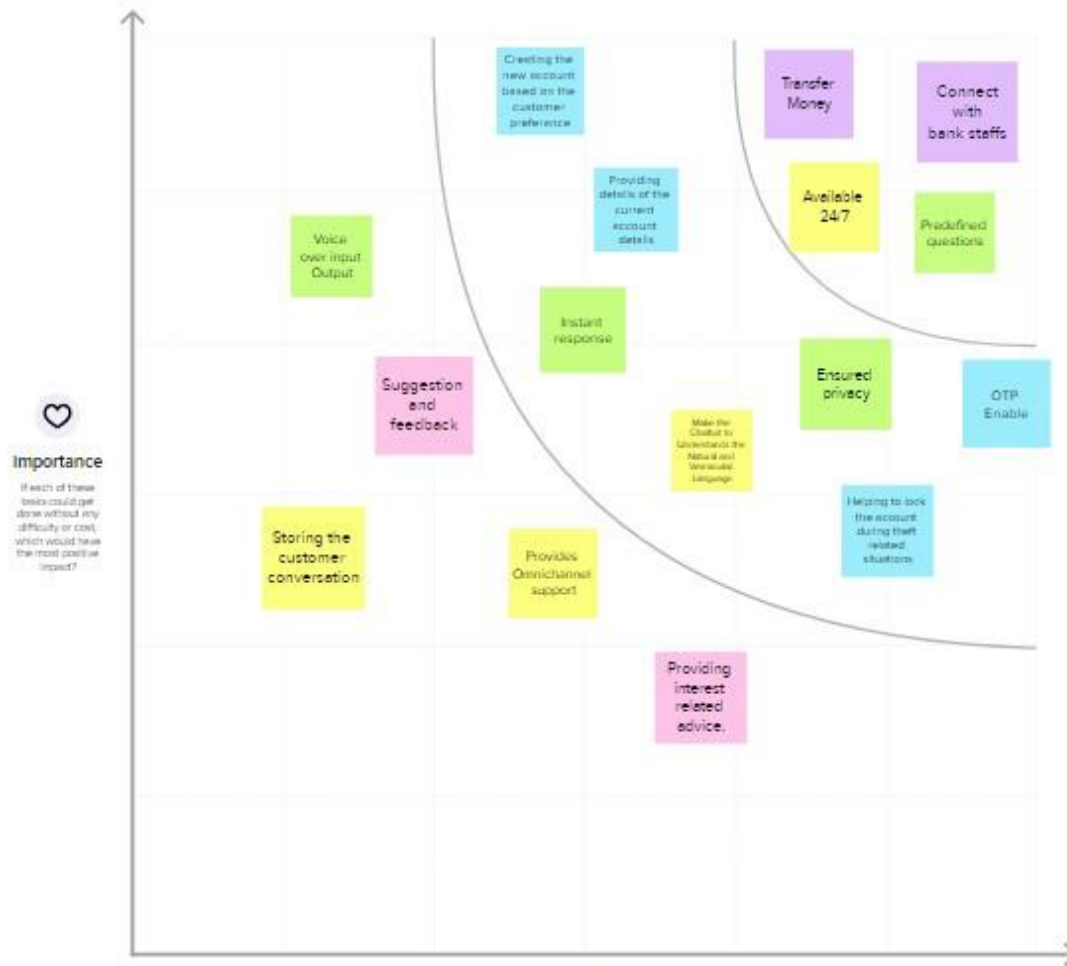

4

Prioritization

The top ideas has been prioritized by our team based on importance and feasibility.

⌚ 20 minutes

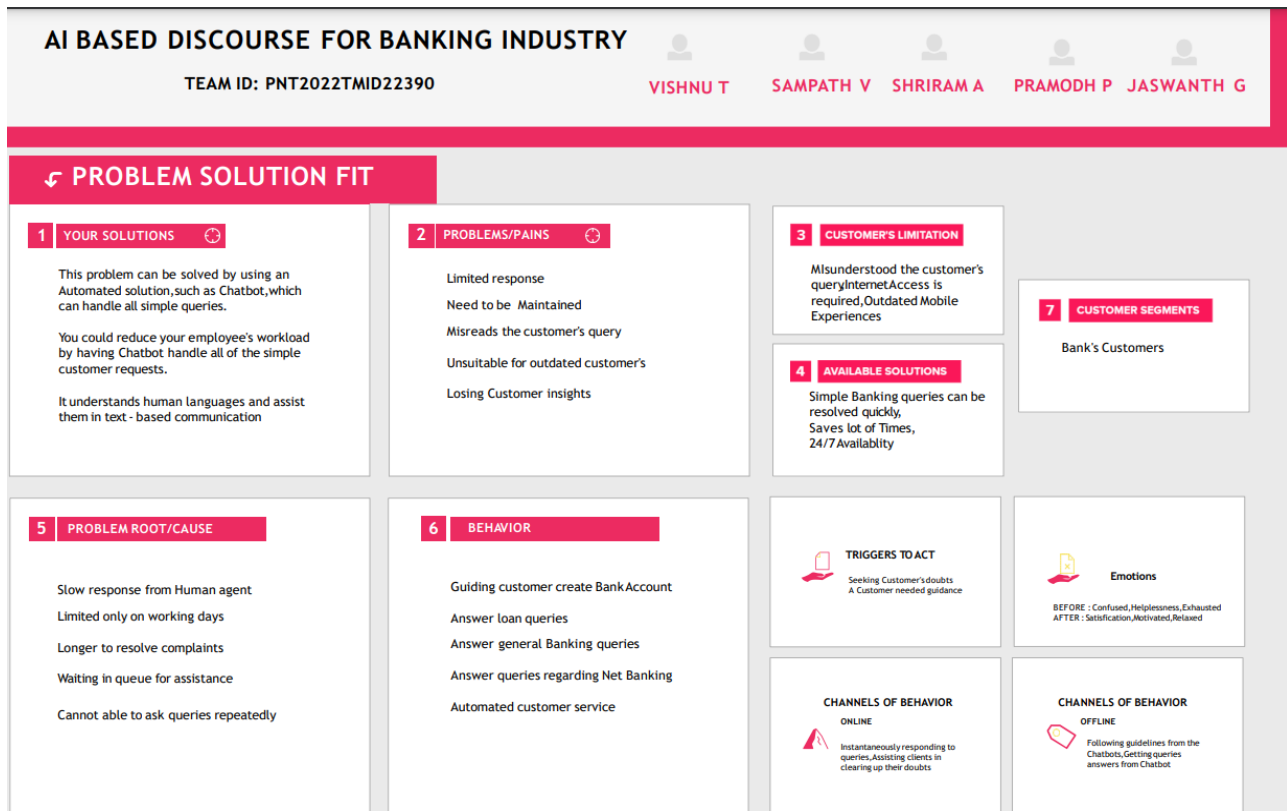

3.3 Proposed Solution

Project team shall fill the following information in the proposed solution template.

S.No	Parameter	Description
1.	Problem Statement (Problem to be solved)	In chatbot to avoid the language barriers for the user/customers who can ask bank related questions like to create a bank account, able to answer loan queries, able to answer general banking queries, and also able to answer queries regarding net banking.
2.	Idea / Solution description	To avoid the language barriers, we can create a Chatbot that can respond according to the user/customers languages all over the world.
3.	Novelty / Uniqueness	<ul style="list-style-type: none">-create a virtual keyboard with popular and continental languages.-automated smart responses and achieve marketing goals efficiently.-Handling more unique and complex queries.- Connect people globally due to its versatility with multiple languages.
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none">-can easily communicate with the banking industry.-provide 24/7 support.-analyze customer data and improve services.

5.	Business Model (Revenue Model)	<ul style="list-style-type: none">-Most of the chatbot can respond only for English and Hindi but we can add the continental languages.-fits into a packet.-uncomplicated Interface.
6.	Scalability of the Solution	<ul style="list-style-type: none">-Consume time.-able to communicate.-it can be used by customers all over the world.

3.4 Problem Solution Fit

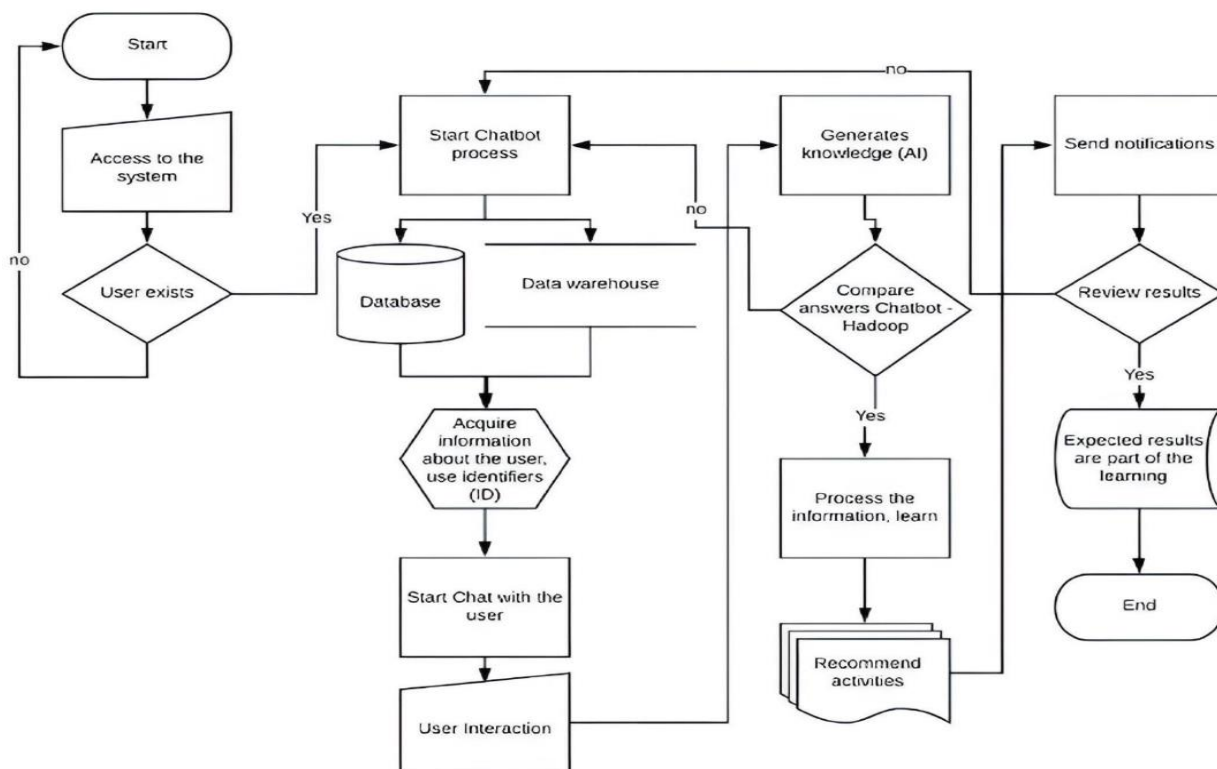

4. Requirement Analysis

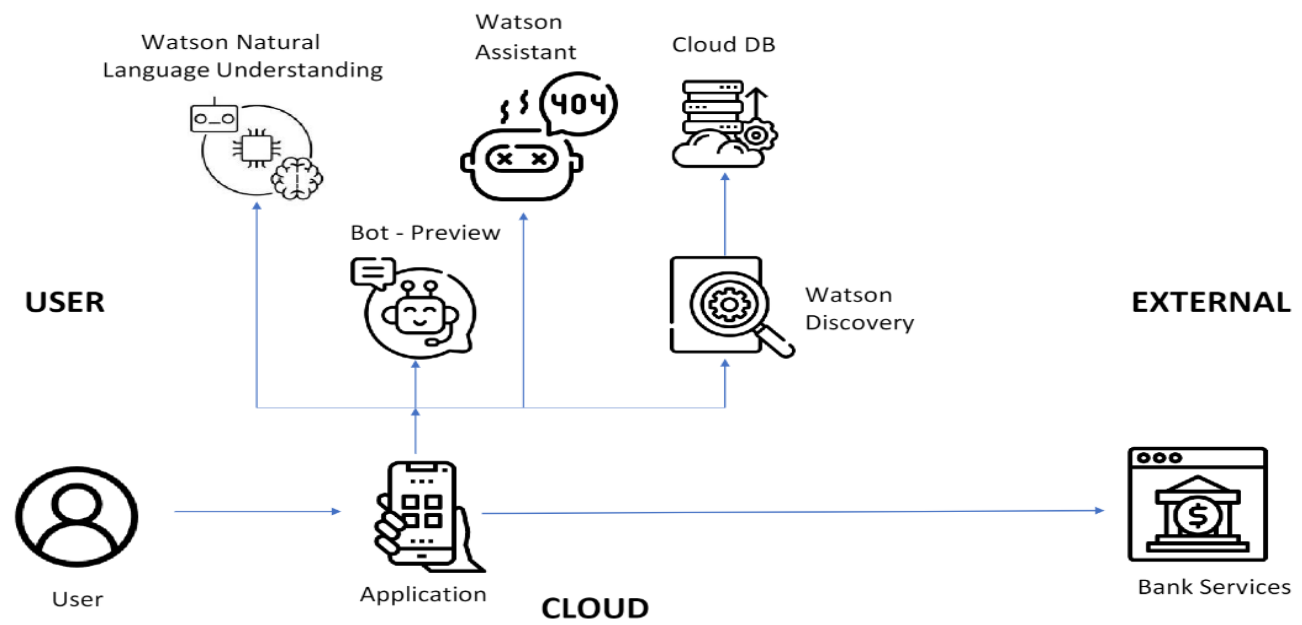

4.1 Functional Requirements

FR No.	Functional Requirement (Epic)
FR-1	User Registration
FR-2	User Confirmation
FR-3	Greeting
FR-4	Help support
FR-5	Set Remainder
FR-6	Announcement
FR-7	Events

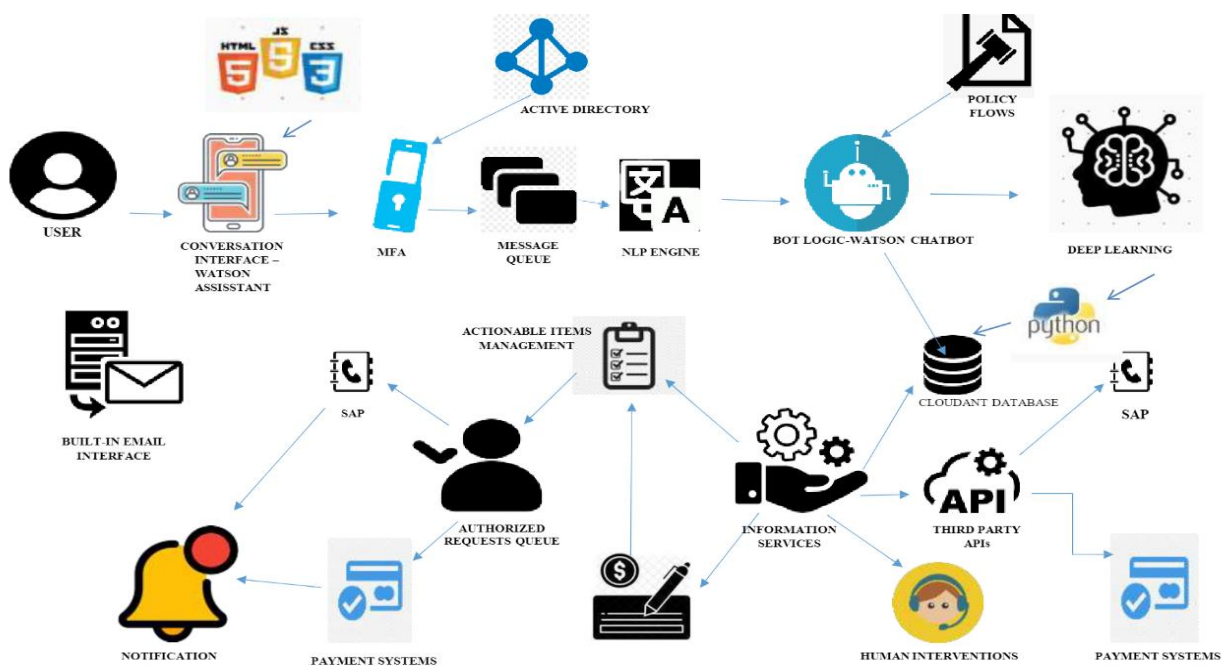

5. Project Design

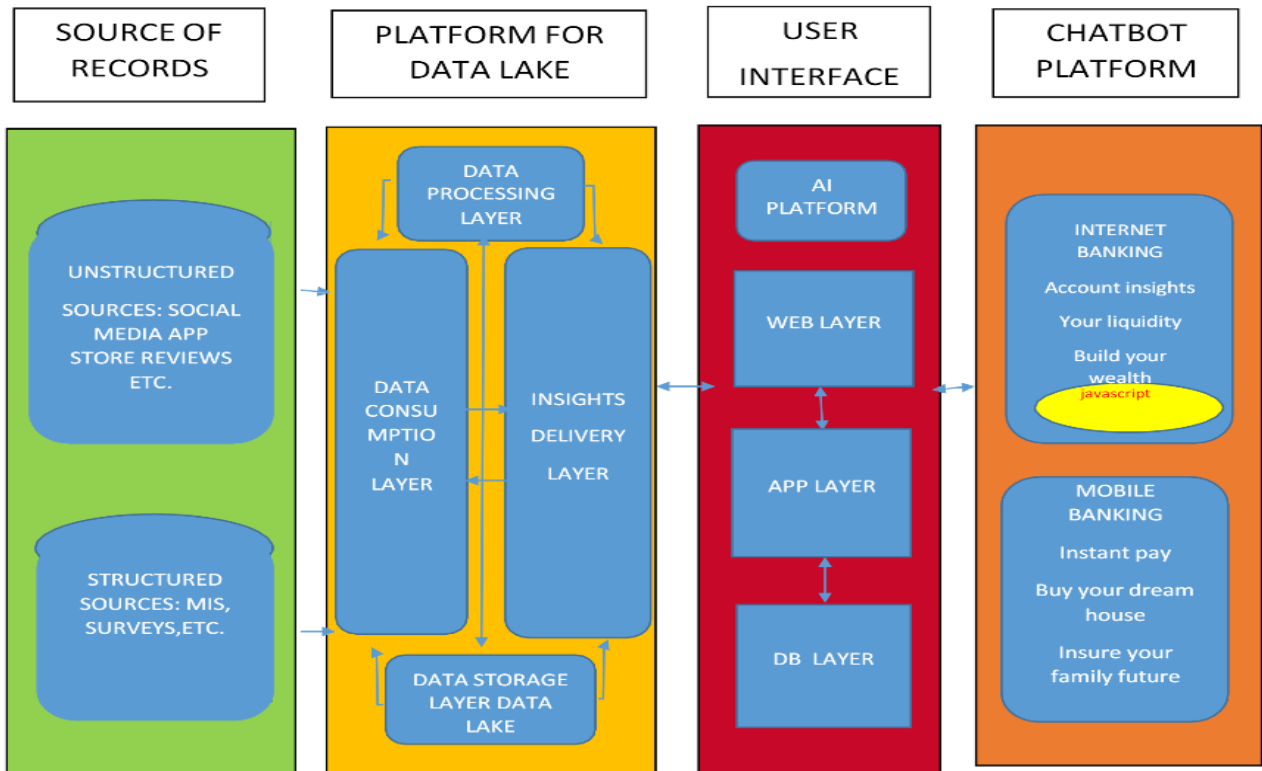

5.1 Data Flow Diagrams

5.2 Solution and Technical Architecture

5.3 User Stories

User Story Number	User Story / Task
USN-1	As a user, I can see a Watson Assistant.
USN-2	As a user, I will see the Chatbot having banking-related skills.
USN-3	As a user, I can converse with the chatbot regarding saving account-related queries.
USN-4	As a user, I can converse with the chatbot regarding current account-related queries.
USN-5	As a user, I can converse with the chatbot regarding loan account-related queries.

User Story Number	User Story / Task
USN-6	As a user, I can converse with the chatbot regarding general queries.
USN-7	As a user, I can converse with the chatbot regarding net banking-related queries.
USN-8	As a user, I can see a flask web page for bank.
USN-9	As a user, I can web pages integrated with a chatbot.
USN-10	As a user, I can communicate with the chatbot24*7.

6.PROJECT PLANNING AND SCHEDULING

6.1 Sprint Planning and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Create IBM Service	USN-1	As a user, I can see a Watson Assistant.	1	Medium	Sampath V
Sprint-1	Chatbot Skills Creation	USN-2	As a user, I will see the Chatbot having banking-related skills.	1	High	Vishnu T
Sprint-2	Creating Saving Account Action	USN-3	As a user, I can converse with the chatbot regarding saving account-related queries.	2	Medium	Pramodh Arjun
Sprint-2	Creating Current Account Action	USN-4	As a user, I can converse with the chatbot regarding current account-related queries.	2	High	Vishnu T
Sprint-3	Creating Loan Account Action	USN-5	As a user, I can converse with the chatbot regarding loan account-related queries.	2	Medium	Jaswanth Reddy

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-3	Creating General Query Action	USN-6	As a user, I can converse with the chatbot regarding general queries.	2	Medium	Shri Ram
Sprint-3	Creating Net Banking Action	USN-7	As a user, I can converse with the chatbot regarding net banking-related queries.	2	High	Vishnu T
Sprint-4	Creating Assistant & Integrate With Flask Web Page (Build Python Code)	USN-8	As a user, I can see a flask web page for bank.	1	Medium	Sampath V
Sprint-4	Build HTML Code	USN-9	As a user, I can web pages integrated with a chatbot.	1	Medium	Pramodh Arjun
Sprint-4	Run The Application	USN-10	As a user, I can communicate with the chatbot24*7.	1	Medium	Jaswanth Reddy

6.2 Sprint Delivery Schedule:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

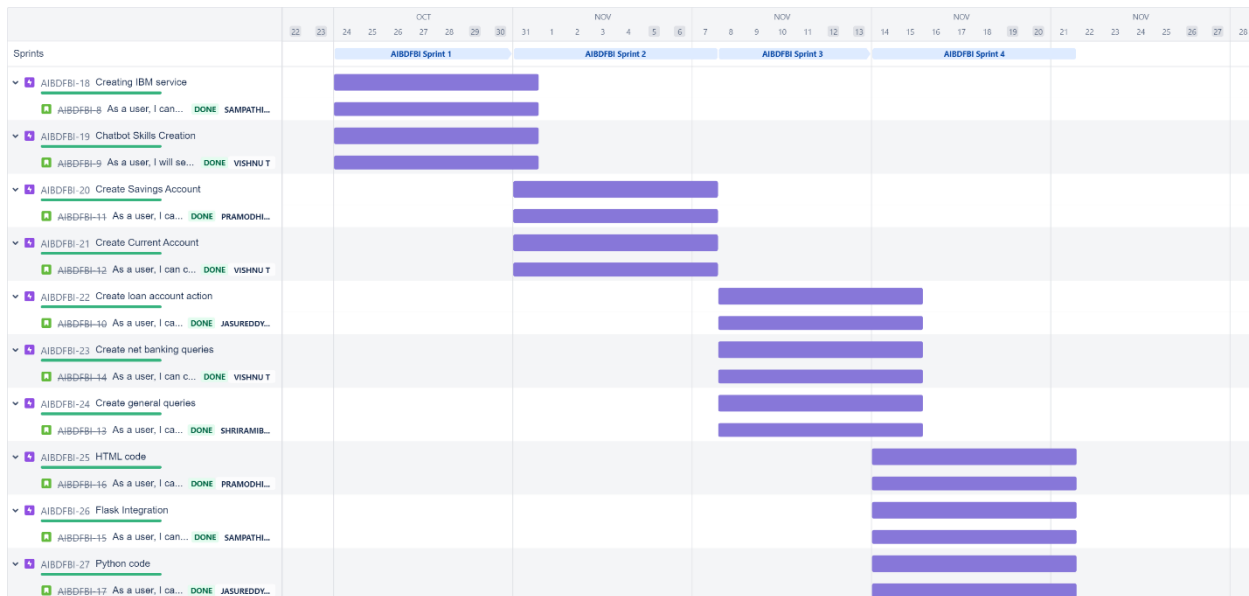

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

6.3 Reports from JIRA:

Sprint 1 to 4:

Sprint 1

Sprint burndown

20 points done, 0 points to go

BETA ? ▾

✓ On track

Sprint 2

Sprint burndown

20 points done, 0 points to go

BETA ? ▾

✓ On track

Sprint 3

Sprint burndown

20 points done, 0 points to go

BETA ? ▾

✓ On track

Sprint 4

Sprint burndown

20 points done, 0 points to go

BETA ? ▾

✓ On track

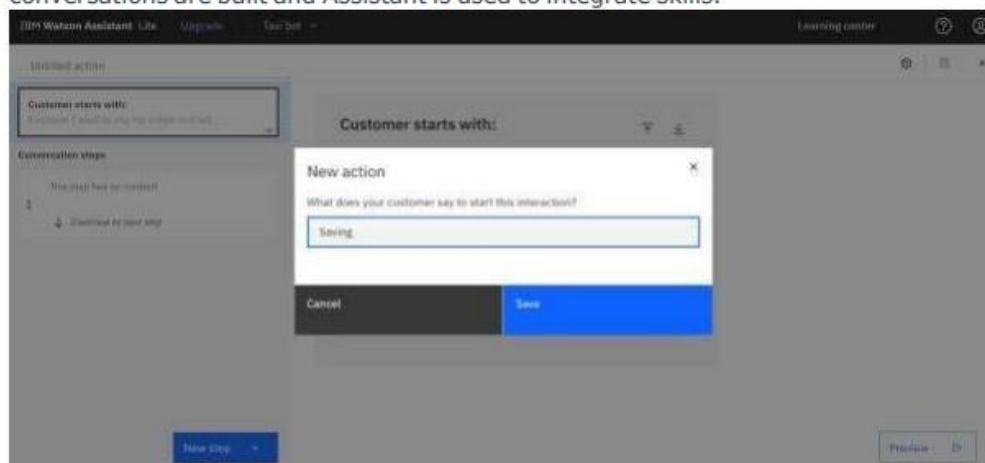

7.CODING & SOLUTIONING

7.1Feature 1

Creating Skills & Assistant For Chatbot

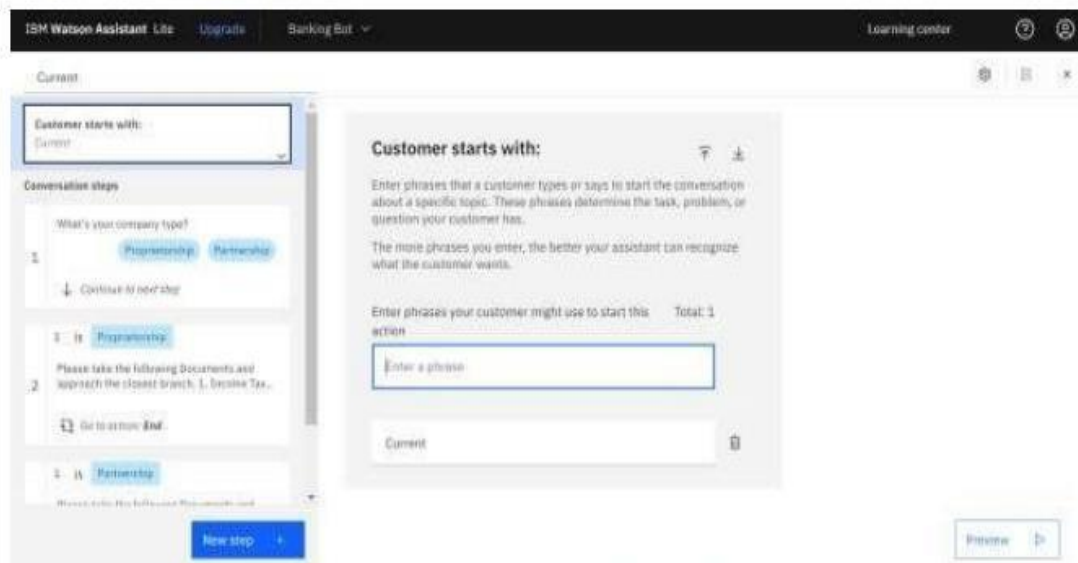

Skills are nothing but actions and steps. Steps are the subset of actions where conversations are built and Assistant is used to integrate skills.

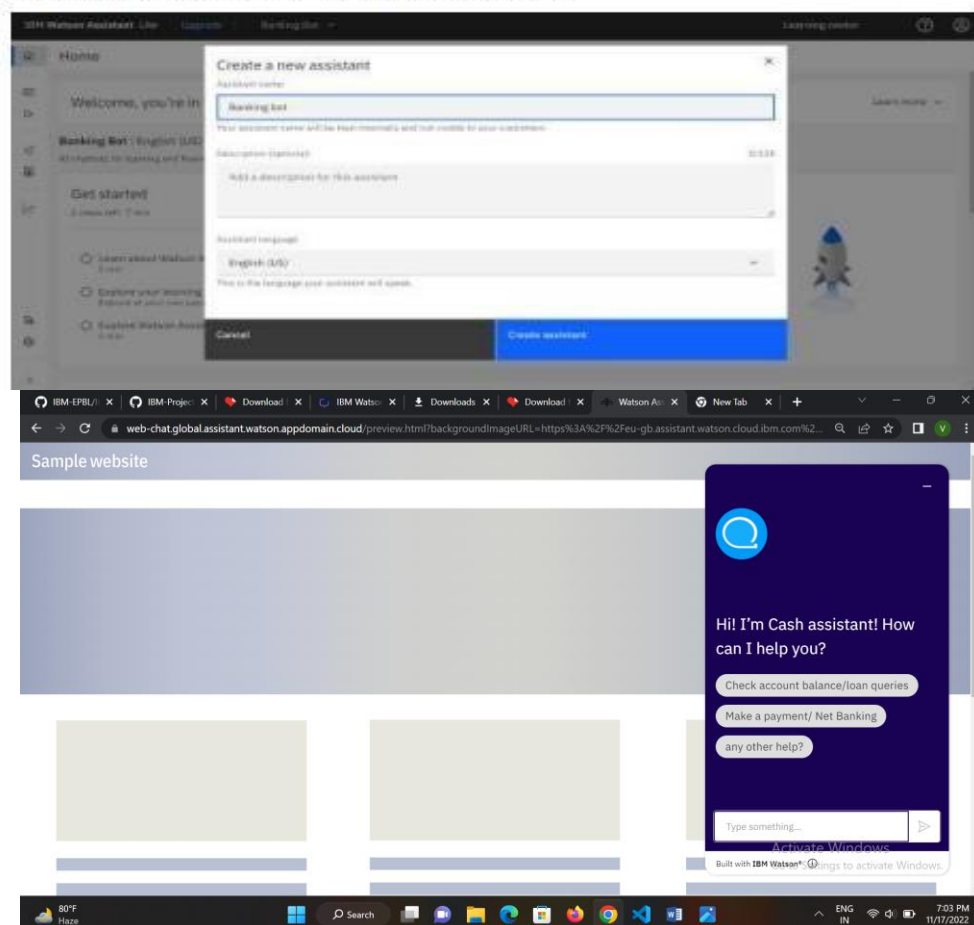

7.2 Feature 2

Creating Current Account Action

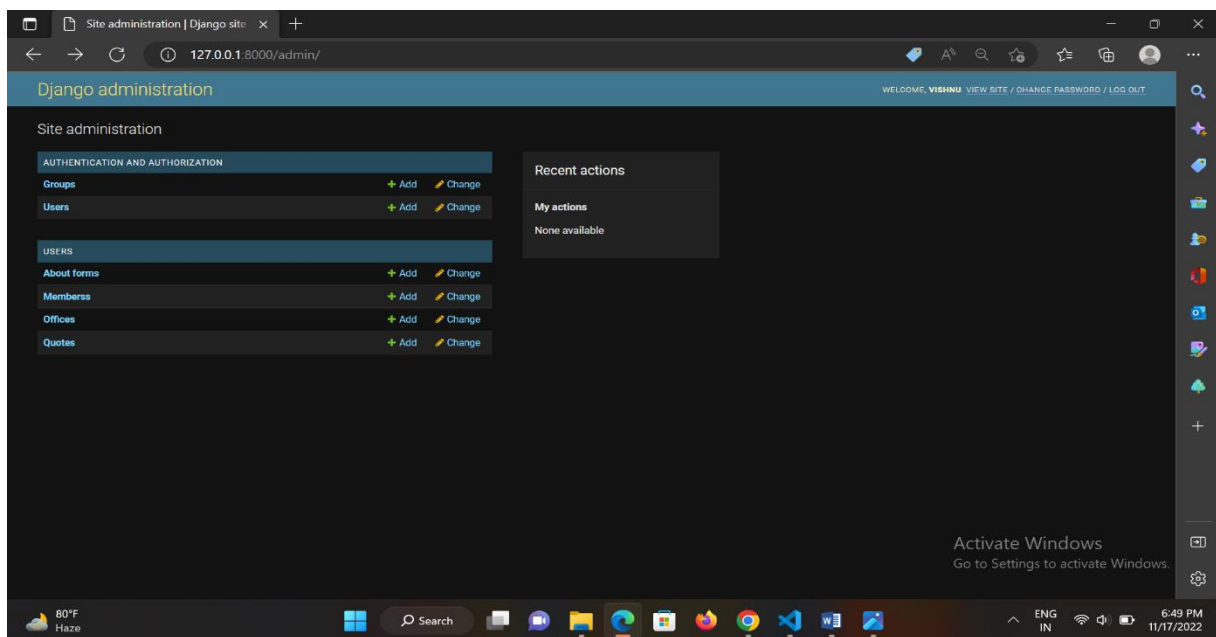

Add steps in savings action.

A default template chatbot is created. Need to add actions.

7.3 Database Schemas

Select user to change | Django s | x

8.TESTING

8.1Test Cases

Test Scenarios	
1	Verify user is able to see the chatbot icon when website is launched
2	Verify the UI elements in chatbot icon popup
3	Verify user is able to see the greeting from chatbot "Hi! I'm a Banking Bot. How can I help you today? Banking Enquiry Loan"
4	Verify user is able to type query in text field.
5	Verify user is able to get the response from chatbot
6	Verify user whether get the response if the user enter the wrong query also
Search	
1	ChatBot icon should display.
2	After 30 seconds Information about chatbot popup displayed
3	User should see the greeting message from chatbot
4	User able to type the query in text field.
5	Users get the response from chatbot.
6	Kindly reach out to our customer care executive. Contact Us @9999xxx999

8.2User Acceptance Testing

UAT Execution & Report Submission

a) Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the AI-based discourse for Banking Industry project at the time of the release to User Acceptance Testing (UAT).

b) Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	1	0	0	0	1
Duplicate	3	1	0	1	5
External	1	3	0	1	5
Fixed	2	5	3	2	12
Not Reproduced	0	0	0	1	1
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	7	9	3	5	24

C) Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested.

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	1	0	0	1
Client Application	1	0	0	1
Security	1	0	0	1
Outsource Shipping	0	0	0	0
Exception Reporting	1	0	0	1
Final Report Output	1	0	0	1
Version Control	1	0	0	1

8.3 PERFORMANCE TESTING

Test Report

Test Cycle **System Test**

EXECUTED	PASSED			130
	FAILED			0
	(Total) TESTS EXECUTED (PASSED + FAILED)			130
PENDING				0
IN PROGRESS				0
BLOCKED				0
	(Sub-Total) TEST PLANNED			130
	(PENDING + IN PROGRESS + BLOCKED + TEST EXECUTED)			

Functions	Description	% TCs Executed	% TCs Passed	TCs pending	Priority	Remarks
New Customer	Check new Customer is created	100%	100%	0	High	
Edit Customer	Check Customer can be edited	100%	100%	0	High	
New Account	Check New account is added	100%	100%	0	High	
Edit Account	Check Account is edit	100%	100%	0	High

9.RESULTS

9.1Performance Metrics

The screenshot shows a web browser window displaying a landing page for an AI-based banking discourse application. The page has a dark background with a circuit-like pattern. The main heading is "AI Based Discourse For Banking Industry" in pink and white text. Below it, a quote reads: "A year spent in artificial intelligence is enough to make one believe in God." A "Join Us" button is centered. The team list on the left includes: 1. VISHNU T, 2. SAMPATH V, 3. PRAMODH ARJUN P, 4. JASWANTH REDDY G, 5. SHRI RAMA. The team ID is PNT2022TMID22390. On the right, a chatbot interface for "Cash assistant" is visible, with options to check account balance/loan queries, make a payment/Net Banking, or ask for other help. The browser's address bar shows "127.0.0.1:5000". The Windows taskbar at the bottom shows the date as 11/16/2022 and the time as 3:09 PM.

10 ADVANTAGES & DISADVANTAGES

ADVANTAGES

1. Chatbots have 24/7 Availability: Chatbots can be available to solve customer problems 24/7 whether it is day or night! They don't need to sleep after all! This is much more difficult to achieve using human customer service as it would require rotating teams that would be more complicated to manage as well.
2. Chatbots can gather Customer Insights: Companies thrive on customer data! The more data they have, the better they can cater to their customers and be much more successful. That's where chatbots can be a big help. Whenever you interact with any chatbots on a company page, you provide basic data such as user preferences, buying habits, sentiments, etc. which can then be analysed to understand market trends, operational risks, etc. And using this information, the company can solve customer issues much easier and create targeted products. This will help in increasing their customer loyalty!

DISADVANTAGES

1. Chatbots sound too Mechanical: Chatbots are not human and so obviously they cannot interact as a human with customers. They sound too mechanical and can only give answers to problems that they have been programmed with. They cannot answer a customer according to the context and they cannot show any emotions if needed. Chatbots also cannot maintain a natural-sounding conversation in-depth with customers and that is why they are only useful in solving basic queries. But this can create a disconnect with customers who prefer the human approach when solving their problems.
2. Chatbots can only handle basic Questions: Chatbots are still a basic Artificial Intelligence technology and so they can only answer the basic questions of customers and provide general information that is already available to them. They cannot solve complicated queries or answer out of script questions and companies need to have human customer service employees that can manage these for them. However, this is changing with time and currently, more and more advanced chatbots are entering the market.

11.CONCLUSION

In this paper we have provided a survey of relevant works of literature on the subject, and we have analysed the state of the art in terms of language models, applications, datasets used, and evaluation frameworks. We have also underlined current challenges and limitations, as well as gaps in the literature. Despite technological advancements, AI chatbots are still unable to simulate human speech. This is due to a faulty approach to dialogue modeling and a lack of domain-specific data with open access. For Information Retrieval chatbots, there is also a lack of a learnt AI model. There is still a gap to be closed in terms of applications between Industry models and current advancements in the sector. Large models necessitate a lot of computing power and a lot of training data. There is no universal framework for evaluating chatbots. Several models depend on human evaluation, yet human evaluation is expensive, time-consuming, difficult to scale, biased, and lacks coherence. A new, reliable automatic evaluation approach should be provided to overcome these restrictions.

12 FUTURE SCOPE

Chatbots are Now Based on Natural Language Processing(NLP)

The goal is to allow users and Artificial Intelligence to communicate naturally and understand complex requests. This would mean that customer service agents would be able to focus on other tasks while the AI takes care of customers' queries. Chatbots in finance, in the digital banking and healthcare industries might save more than 12 billion USD in a year by 2022. According to several estimates, financial organizations might save 2 trillion USD by 2030 by implementing artificial intelligence and cutting costs by 35%.In the digital banking business, banks with Chatbots can automate a variety of functions in addition to enhancing everyday operations and the universal consumer experience as fund transfer, Notifications & Alerts at the Right Time, Get help from a Customer Service Representative, simple lead generation.
